SUBJECT:MOBILE APPLICATION DEVELOPMENT(CS-375)

BATCH: SPRING-2024

DEPARTMENT OF COMPUTER SCIENCE

ABASYN UNIVERSITY
ISLAMABAD CAMPUS

TITLE: Mobile Application Development using React Native (Expo)

Introduction

This assignment focuses on developing multiple mobile applications using React Native with Expo. Each application demonstrates key concepts such as UI design, navigation, local database management, and state handling.

Tools & Technologies

- React Native (Expo)
- SQLite (expo-sqlite)
- AsyncStorage
- React Navigation
- React Native Chart Kit

Applications Developed

1. E-Commerce App

Description:
Displays products fetched from a local SQLite database.

Features:

- Product listing
- Product details screen
- Add to cart functionality
- Loading and error handling

---

2. Social Media App

Description:
A simple social feed application.

Features:

- Feed screen showing posts
- Post details screen
- Editable user profile
- Data stored in SQLite

---

3. Ticket Booking App

Description:
Allows users to browse movies and select seats.

Features:

- Movie listing
- Search functionality
- Seat selection system
- Save selected seats using AsyncStorage

---

4. Expense Tracker App

Description:
Tracks income and expenses.

Features:

- Dashboard with transactions
- Income, expense, and balance calculation
- Graphical reports using charts

---

5. Food Delivery App

Description:
Displays restaurants and order history.

Features:

- Restaurant listing
- Filter by cuisine
- Order history screen
- Navigation between screens

System Design

All applications follow:

- Component-based architecture
- Navigation using React Navigation
- Data storage using SQLite
- State management using React Hooks

Results

All applications were successfully implemented with functional UI and backend integration. Each app meets the requirements specified in the assignment.

Conclusion

This assignment provided hands-on experience in mobile app development using React Native. It enhanced understanding of UI design, navigation, local storage, and database integration.

Future Improvements

- Add authentication system
- Connect with real backend APIs
- Improve UI with animations
- Add cloud storage
